Professional Summary

Aspiring AI/ML Engineer currently pursuing MCA at the University of Kalyani with hands-on experience in Machine Learning, Deep Learning, and LLM-based application development. Skilled in building AI-powered applications using Python, TensorFlow, LangChain, FastAPI, and Streamlit, along with deployment using GitHub and Render. Passionate about solving real-world problems through AI, with experience in predictive systems, conversational AI, and data-driven application development.

Education

Master of Computer Applications (MCA) University Of Kalyani, Kalyani, Nadia	2024 – 2026
Bachelor of Science Asutosh College CGPA: 7.9	2020 – 2023

Technical Skills

Programming Languages: Python, Java, JavaScript, SQL
AI/ML & Data Science: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, OpenCV, LangChain, LangGraph
Computer Vision: CNNs, Neural Style Transfer, VGG-19, Adaptive Instance Normalization (AdaIN)
Backend & Frameworks: FastAPI, Streamlit, Node.js
Web Technologies: HTML, CSS
Databases: MySQL, MongoDB
Tools & Platforms: Git, GitHub, Hugging Face
Core Concepts: Machine Learning, Deep Learning, OOP, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

Projects

Neural Style Transfer using AdaIN | *PyTorch, Flask, Computer Vision*
Github Link: <https://github.com/7430souvik/NST.git>
Built a Neural Style Transfer system using AdaIN and a pretrained VGG-19 encoder for artistic image stylization. Implemented real-time style transfer with adjustable style intensity and image upload support.

SafeSpace AI Agent | *Python, FastAPI, LangChain, LLM, Streamlit, Render*
Live Demo: <https://safespace-ai-mental-health-therapist-g8drxvgrzgmcwetctxqek4.streamlit.app/>
Github Link: <https://github.com/7430souvik/SafeSpace-AI-Mental-Health-Therapist>

Developed an AI-powered assistant application capable of intelligent conversation, and contextual response generation using Large Language Models (LLMs).
Integrated LangChain-based workflows for prompt orchestration, conversational memory, and AI agent execution.

AI Doctor: Multimodal Medical Assistant | *Python, Groq API, Llama Vision, Gradio, Hugging Face*
Developed a multimodal AI healthcare assistant capable of analyzing medical images and patient voice inputs through a unified web interface. Integrated Groq Whisper for speech-to-text transcription and Llama Vision models for medical image understanding and response generation. Implemented text-to-speech functionality using gTTS/ElevenLabs and deployed the application on Hugging Face Spaces.

Live Demo: <https://huggingface.co/spaces/chatterjee080/AI-doctor>
Github Link: <https://github.com/7430souvik/AI-DOCTOR/tree/main>

Certifications

- Agentic AI Engineering with Langchain
- Bits and Bits of Computer Networking
